                                                                                                                                                                                                                                         The present invention relates to a new anti-fouling composition. The composition involves a surface coating material, a hexose oxidase enzyme obtained from a marine organism and a substrate for the enzyme. The anti-fouling composition is useful as a coating formulated for treating a surface, e.g. outdoor wood work, external surface of a central heating system, or a hull of a marine vessel. It is also useful as an anti-fouling agent for marine structures exposed to
                                                                                                                                                                                                                                                                                                                                                                              New anti-fouling composition, useful as a coating for treating different surfaces, e.g. outdoor woodwork, external surface of central heating system, or a hull of a marine vessel
                                                                                                                                                                                                      Sequence 1644

```

and modifying the sequence so that the modified sequence is expressed, under identical conditions, at a level at least 10% higher than the non-modified sequence. The method is useful for producing hexose oxidase in prokaryotic and eukaryotic cells. Previous methods of producing hexose oxidase were to isolate the enzyme from a source that naturally produces the enzyme, using host organisms which produce a relatively low level of expression. Therefore, industrial production of the enzyme is not feasible using this method. This is a much improved method which produces at least 250 mg enzyme per liter 10% higher

                                                                                                                                   AAT76552 encodes hexose oxidase (HO) of the marine algae species (Chondrus crispus. HO is useful in the production of food products, e.g. dairy products, starch-containing food products (dough) and non-dairy beverages. HO and active peptide fragments have antimicrobial and antioxidant properties and act by removing all the oxygen in a food packaging. HO and peptides of HO can also be used in an animal feed, especially silage. Further uses are to reduce, or analyse, the sugar content in a food, in the production of cosmetics, tooth care products or a pharmaceutical product and in lactone production. HO can be recombinantly produced in industrially appropriate quantities, and at a quality and purity level which renders the polypeptide suitable for industrial purposes.

                                                                                                                                                                                                                                                                                        wild type hexose oxidase can be produced by isolating a nucleotide sequence coding for hexose oxidase naturally produced by an organism and modifying the sequence so that the modified sequence is expressed, under identical conditions, at a level at least 10% higher than the non-modified sequence. The method is useful for producing hexose oxidase in prokaryotic and eukaryotic cells. Previous methods of producing hexose oxidase were to isolate the enzyme from a source that naturally produces the enzyme, using host organisms which produce a relatively low level of expression. Therefore, industrial production of the enzyme is not feasible using this method. This is a much improved method which produces at least 250 mg enzyme per liter of fermentation medium. Twenty-eight primers (See AAZ94018).

With codon usage possibly optimised for expression in P. pastoris were used to produce the synthetic hexose oxidase gene (See AAZ94039).

                                                                                              cc hexose oxidate (D-hexose:02-oxireductase, EC 1.1.3.5), (also referred to cas HOX), gene. The native HOX gene was altered using site-directed cc mutagenesis in order to match the codon usage to known codon preferences of biotechnologically relevant yeasts, such as Pichia sp., to facilitate cc high level production in these organisms. The invention involves a method cc for releasing a soluble or membrane associated intracellular protein of cc interest (POI) from a cell involving contacting a cell comprising a cc soluble or membrane associated intracellular POI with a membrane cell composition (I) and causing the POI to be released from the cell composition (I) and causing the POI to be released from the call intracellular POI and causing the POI such as an interleukin I receptor antagonist (II-Ira) which involves contacting a cell composition (I) and causing FOI. The method is also considered cell comprising II-Ira with (I) and causing FOI. The method is also constituted cell comprising the POI. The method is useful for release a POI couseful for screening mutated cells or transformed cells producing cell-wated levels of intracellular POI. The method is used to release a POI combrane associated intracellular POI without the use of conventional cell disruption techniques. The resulting cell extract contains less contains such as yeast, before Jayosylation takes place. The method can be used to conventions less contains such as yeast, before Jayosylation takes place. The method can be used to contain the contact of intracellular poi without the use of conventions less contains such as yeast, before Jayosylation takes place. The method can be used to contain the contact of intracellular poi without the such as contains less contains such as yeast, before of contacts poi without the contains and contact of intracellular poi without the such as yeast, before plycosylation takes place. The method can be used to contain the contact of intracellular poi without the contains and contact of the place of the place of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ

                          of producing hexose oxidase were to isolate the enzyme from a source that naturally produces the enzyme, using host organisms which produce a relatively low level of expression. Therefore, industrial production of the enzyme is not feasible using this method. This is a much improved method which produces at least 250 mg enzyme per liter of fermentation medium. Twenty-eight primers (See AAZ94011-Z94038) with codon usage possibly optimised for expression in P. pastoris were used to produce the synthetic hexose oxidase gene (See AAZ94039)
                                                                                                                                                                              Wild type hexose oxidase can be produced by isolating a nucleotide sequence coding for hexose oxidase naturally produced by an organism and modifying the sequence so that the modified sequence is expressed, under identical conditions, at a level at least 10% higher
                                                                                                                                                                                                                                                                                                  Nucleic acid fragment useful for producing large amounts of hexose oxidase comprises nucleotide sequence encoding hexose oxidase that is

Releasing soluble or membrane associated intracellular protein from a cell for manufacturing food, comprises contacting the cell with a membrane extracting composition and causing the protein to be released in soluble form with a be released

Claim 19; Fig 5; 108pp; English

The sequence represents the PCR primer hox5a used to clone synthetic CC as HOX), gene. The native HOX gene was altered using site-directed CC as HOX), gene. The native HOX gene was altered using site-directed CC mutagenesis in order to match the codon usage to known codon preferences of biotechnologically relevant yeasts, such as pichia sp., to facilitate high level production in these organisms. The invention involves a method CC for releasing a soluble or membrane associated intracellular protein of CC interest (POI) from a cell involving contacting a cell comprising a CC extracting composition (I) and causing the POI with a membrane cell in a soluble form. The method is useful for releasing POI, such as transformed cell comprising II-lra with (I) and causing IV-lra to be creleased from the transformed cell, in a soluble form. The method is also useful for screening mutarted cells or transformed cells producing celevated levels of intracellular POI. The method is used to release a POI for manufacturing food products, such as beverages, preparation of detergents, and in baking as a dough improving agent. The method obtains cell disruption techniques. The resulting cell extract contains less contaminating intracellular POI without the use of conventional contaminating intracellular POI without the use of conventional contaminating such as yeast, before glycosylation takes place. The method can be used to prevent contact of intracellular POI with the extraction of contaminating intracellular POI can be recovered from a eukaryotic host organism such as yeast, before glycosylation takes place. The method can be used to prevent contact of intracellular POI with the extractellular POI with the extracellular POI with the extr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                    for releasing a soluble or membrane associated intracellular protein of interest (POI) from a cell involving contacting a cell comprising a soluble or membrane associated intracellular POI with a membrane extracting composition (I) and causing the POI to be released from the cell in a soluble form. The method is useful for releasing POI, such as an interleukin I receptor antagonist (II-Ira) which involves contacting a transformed cell comprising II-Ira with (I) and causing II-Ira to be released from the transformed cell, in a soluble form. The method is also useful for screening mutated cells or transformed cells producing elevated levels of intracellular POI. The method is used to release a POI for manufacturing food products, such method is used to release a POI for manufacturing food products, such method is used to release a fast, specific and economically efficient extraction of a soluble or membrane associated intracellular POI without the use of conventional
                                                                                                                                                                                                                                                                                                                     The sequence represents the PCR primer 4 used to clone synthetic hexose oxidase (D-hexose:O2-oxireductase, EC 1.1.3.5), (also referred to as HOX), gene. The native HOX gene was altered using site-directed mutagenesis in order to match the codon usage to known codon preferences of biotechnologically relevant yeasts, such as Pichia sp., to facilitate high level production in these organisms. The invention involves a method
cell disruption techniques. The resulting cell extract contains less contaminating intracellular DNA and is relatively free of cell wall fragments. The intracellular POI can be recovered from a eukaryotic host
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 19; Fig 5; 108pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Releasing soluble or membrane associated intracellular protein from a cell for manufacturing food, comprises contacting the cell with a membrane extracting composition and causing the protein to be released in a label for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HOX; seaweed; hexose oxidase; interleukin I receptor antagonist; IL-1ra; food manufacturing; beverage; detergent; baking; dough improving agent; D-hexose:O2-oxireductase; EC 1.1.3.5; PCR primer; ss.

                                                       than the non-modified sequence. The method is useful for producing hexose oxidase in prokaryotic and eukaryotic cells. Previous methods of producing hexose oxidase were to isolate the enzyme from a source that naturally produces the enzyme, using host organisms which produce a relatively low level of expression. Therefore, industrial production of the enzyme is not feasible using this method. This is a much improved method which produces at least 250 mg enzyme per liter of fermentation medium. Twenty-eight primers (See hAZ94011-Z94038) with codon usage possibly optimised for expression in P. pastoris were used to produce the synthetic hexose oxidase gene (See AAZ94039)
                                                                                                                                                                                                                                                                                                                                                                           Wild type hexose oxidase can be produced by isolating a nucleotide sequence coding for hexose oxidase naturally produced by an organic and modifying the sequence so that the modified sequence is expressed, under identical conditions, at a level at least 10% high
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid fragment useful for producing large amounts of hexose oxidase comprises nucleotide sequence encoding hexose oxidase that modified by at least one codon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       growth medium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ঠ
The sequence represents the PCR primer hox9a used to clone synthetic CC hexose oxidase (D-hexose:O2-oxireductase, EC 1.1.3.5), (also referred to CC as HOX), gene. The native HOX gene was altered using site-directed CC mutagenesis in order to match the codon usage to known codon preferences CC of biotechnologically relevant yeasts, such as Pichia sp., to facilitate CC high level production in these organisms. The invention involves a method CC for releasing a soluble or membrane associated intracellular protein of CC interest (POI) from a cell involving contacting a cell comprising a CC soluble or membrane associated intracellular POI with a membrane CC extracting composition (I) and causing the POI to be released from the CC cell in a soluble form. The method is useful for releasing POI, such as CC transformed cell comprising II-1ra with (I) and causing II-1ra to be CC useful for screening mutated cell, in a soluble form. The method is useful for membrane associated levels of intracellular POI. The method is used to release a POI CC detergents, and in baking as a dough improving agent. The method obtains a fast, specific and economically efficient extraction of a soluble or cell disruption techniques. The resulting cell extract contains less contaminating intracellular POI can be recovered from a eukaryotic host contaminating intracellular POI can be recovered from a eukaryotic host contaminating intracellular POI can be recovered from a eukaryotic host contaminating intracellular POI can be recovered from a eukaryotic host contaminating intracellular POI can be recovered from a eukaryotic host contaminating intracellular POI can be recovered from a eukaryotic host contaminating intracellular POI can be recovered from a eukaryotic host contaminating intracellular POI can be recovered from a eukaryotic host contaminating intracellular POI can be recovered from a eukaryotic host contaminating intracellular POI can be recovered from a eukaryotic host can be seen contaminating intracellular POI can be recovered fro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                  that naturally produces the enzyme, using host organisms which produce a relatively low level of expression. Therefore, industrial production of the enzyme is not feasing this method. This is a much improved method which produces at least 250 mg enzyme per liter of fermentation medium. Twenty-eight primers (See AAZ94011-Z94038) with codon usage possibly optimised for expression in P. pastoris
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
The sequence represents the PCR primer 9 used to clone synthetic CC hexose oxidase (D-hexose:O2-oxideate, EC 1.1.3.5), (also referred to CC as HOX), gene. The native HOX gene was altered using site-directed CC mutagenesis in order to match the codon usage to known codon preferences of biotechnologically relevant yeasts, such as Pichia sp., to facilitate high level production in these organisms. The invention involves a method CC for releasing a soluble or membrane associated intracellular protein of CC interest (POI) from a cell involving contacting a cell comprising a Soluble or membrane associated intracellular POI with a membrane associated intracellular POI to be releasing POI, such as cell in a soluble form. The method is useful for releasing POI, such as creaming cell comprising II-1ra with (I) and causing II-1ra to be consisted from the transformed cell, in a soluble form. The method is also CC released from the transformed cell, in a soluble form. The method is used to release a POI for manufacturing food products, such as beverages, preparation of a fast, specific and economically efficient extraction of a soluble or cell disruption techniques. The resulting cell extract contains less contaminating intracellular POI can be recovered from a eukaryotic host fragments. The intracellular POI can be recovered from a eukaryotic host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Releasing soluble or membrane associated intracellular protein from a cell for manufacturing food, comprises contacting the cell with a membrane extracting composition and causing the protein to be released
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               food manufacturing; beverage; detergent; baking; dough improving agent;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
The sequence represents the PCR primer hox10b used to clone synthetic CC hexose oxidase (D-hexose:O2-oxireductase, EC 1.1.3.5), (also referred to CC as HOX), gene. The native HOX gene was altered using site-directed CC mutagenesis in order to match the codon usage to known codon preferences of biotechnologically relevant yeasts, such as Pichia sp., to facilitate CC high level production in these organisms. The invention involves a method CC for releasing a soluble or membrane associated intracellular protein of CC interest (POI) from a cell involving contacting a cell comprising a CC soluble or membrane associated intracellular poI with a membrane CC extracting composition (I) and causing the POI to be released from the CC cell in a soluble form. The method is useful for releasing POI, such as CC an interleukin I receptor antagonist (II-1ra) which involves contacting a CC transformed cell comprising II-1ra with (I) and causing II-1ra to be creleased from the transformed cell, in a soluble form. The method is also cuseful for screening mutated cells or transformed cells producing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches 117;

8 g 밁 ş Query Match 7.1%; Score 116.4; DB 22; Length 118; Best Local Similarity 99.2%; Pred. No. 6.5e-25; Matches 117; Conservative 0; Mismatches 1; Indels 0; elevated levels of intracellular POI. The method is used to release a POI for manufacturing food products, such as beverages, preparation of detergents, and in baking as a dough improving agent. The method obtains a fast, specific and economically efficient extraction of a soluble or membrane associated intracellular POI without the use of conventional cell disruption techniques. The resulting cell extract contains less contaminating intracellular DNA and is relatively free of cell wall fragments. The intracellular DNA and is relatively free of cell wall fragments the intracellular POI can be recovered from a eukaryotic host organism such as yeast, before glycosylation takes place. The method can be used to prevent contact of intracellular POI with the extracellular growth medium. Sequence 118 BP; 39 A; 26 C; 20 G; 33 T; 0 other; 0; Gaps 0

იიი

Pred. No. is the number of results predicted by chance to have

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
